

Italian Sociologists at stake.

A quantitative study on the internationalization and productivity of Italian sociologists pre and after ANVUR-VQR

Supervisor: Prof. Flaminio Squazzoni

Student: Ali (Aliakbar Akbaritabar)

Aliakbar.akbaritabar@unimi.it

Outline of presentation

- Brief introduction
- Brief introduction to Literature reviewed
- Research questions and theoretical framework
- Method & Data
- Results (so far)
- Conclusions (so far)
- Next steps and timetable of research project

Introduction

- Research work doesn't happen in a **social** and **institutional vacuum**
- Different **individual** and **structural** factors might influence scientist's work, including **institutional incentives** and **academic contexts** (through studying: **publication strategies** and **collaboration**, ...)
- **Individual motivations** and **publication strategies** are also sensitive to institutional policies, i.e., **career incentives and rewards**
- On **June 24th 2010**, the Italian government established ANVUR ("Agenzia Nazionale di Valutazione del Sistema Universitario e della Ricerca") **to assess research productivity**, including the **degree of international exposure** of research performed by Italian academics, and **establish criteria to link promotion and resources to productivity**
- This paper aims to provide an **empirical analysis of the situation of our discipline before and after the implementation of ANVUR policies** as a means to understand **how Italian sociologists have reacted to this new institutional context**

Literature review

Literature review

Three main bodies of research related to this paper **based on subject and focus**

- a general framework
- notion of collaboration
- Measurement efforts
- what should be considered collaboration and what should not

- research focused on **coauthorship** and coauthorship networks as a measure of research collaboration

- focused more on **international coauthorship** as a sign of the globalization of science;
- assessing pros and cons of international collaborations and suggesting empirical measures

Methodologically speaking

Quantitative

Qualitative

Literature review

- **Katz and Martin** (1997) suggested to categorize previous research on collaboration in four categories:
 - 1) **multiple authorship** and collaboration
 - 2) **factors contributing to collaboration**
 - 3) **sources** of collaboration, the role of communication and the effects of **physical and social proximity**
 - 4) the effects of collaboration on **productivity and impact**
- Level of **centralization in the countries network** in social sciences was higher than that in hard sciences
- Although **European programs and policies** have tried to incentivize international collaboration, it seems that these policies **do not have the same impact everywhere and could only reinforce pre-existing patterns**

Literature review

- 2 Underlying assumptions in study of collaborations through coauthorship:
 - **All authors contributed** to paper != “honorary authorship”
 - **All Collaborations lead to publication** != rejected papers, patents, collaborations without intention to publish
- Qualitative results:
 - Most interviewees suggested language as one of the **most dramatic challenges** in international research collaboration.
- Researchers in different stages of their research career have **different interest and aims** in mind while initiating a research collaboration both internationally or domestic
- **Significant connection** between key variables of interest such as researcher rank, region, gender, and funding source

Literature review

- International scientific cooperation is increasing
- different factors both **internal** and **external** to science affecting this
- Differences among **countries** and **fields of science**
- **higher (more than two times) citation** for papers that are written internationally
- larger the **national scientific enterprise**, the **smaller the proportion of international coauthorship** (e.g. case of France)
- International coauthorship is **geographically driven**, suggesting that extra-scientific factors (for example, geography, political factors and language) might have an influence
- Scientific collaboration and outputs would **strongly depend on contextual factors**, e.g., disciplines and fields, are largely resilient against institutional policies, at least in the short run, while they could incorporate a complex mix of inter-generational forces and incentive-sensitive strategic behavior

Table 3. Co-authorship order in the publications

Co-authorship order	Number of publications
group member(s) – ... – group leader(s)	113
group leader(s) – ... – group member(s)	7
group leader – ... group member(s) ... – group leader	2
group member(s) – group leader(s) ... – group member(s)	2

Literature review

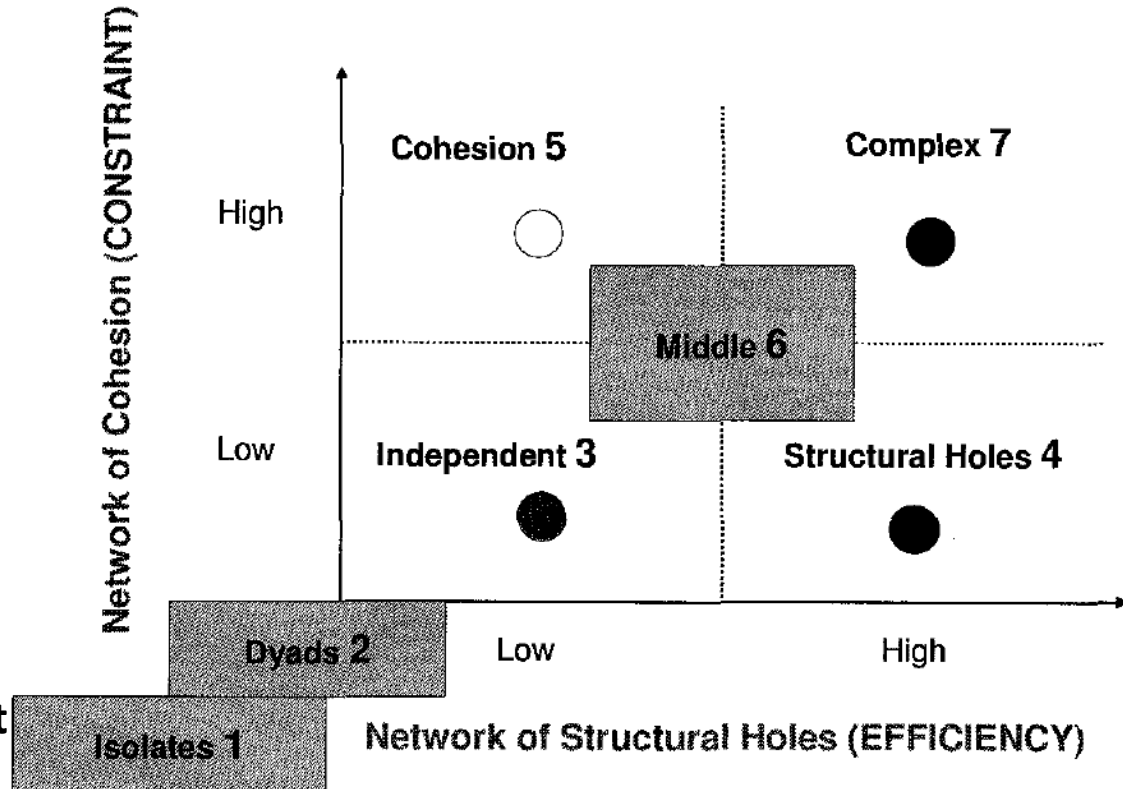

Figure 3. Factors influencing the rewarding of a collaboration

Theoretical framework

- Social Capital
 - **Cohesion** (Coleman)
 - **Structural Holes** (Burt)
- coauthorship network structures and success in publications
- 7 grouping of coauthorship strategies authors use
- Scholars who use **both cohesive relationships and bridge between different communities** to further their publication chances (called **complex strategy** in this work) are the **most interesting scientists that manage between coordination costs and pros of cohesive groups in publication activity**

Co-authorship Network Structures

Research questions (explorative so far)

- Are there **different research styles among different sub communities** in the Italian community? (e.g., different exposure to **internationalization**, different **publication attitudes**, different **coauthorship patterns**)
- Is there a **UNI/department effect on productivity**? For example, are sociologists working in sociology department more productive or being exposed to other disciplinary communities is beneficial?
- Did the **community react to the new internationalization** trend imposed by ANVUR in 2010 by modifying certain patterns?
 - Did certain **specific communities adapt better** than others, and did initial conditions of those specific communities matter (e.g., were those communities already more internationalized before 2010 also those one which reacted better and were even more internationalized later?)

Method and Data

Data (Administrative data)

- Coauthorship as a measure of research collaboration
- **administrative list of all Italian sociologists** including **faculty members** (1029 in total) and **Postdocs** (198 in total) from MIUR website
 - **Seniority** (rank in university professors' rankings like Assistant professor, Associate professor, and Full professor)
 - Sociology **areas** (ANVUR categories)
 - **Gender**
 - **Affiliation**
 - **Department**
 - Last and first **names**

Data (Scopus and Google scholar)

- **R script** to interact with Google scholar and Scopus APIs and extract author publications data (July 27th 2016 – mid-August)
- **Search in web interface of both databases**
- **Download Scopus csv** files of publications data (September 8th – 15th 2016)
- **4 Italian native speakers** (PhD student, postdoc and professor) help with searching names
- **All publication records of each sociologist**, Scopus numeric ID, h-index
- R packages used: **base, dplyr, igraph, ggvis**

Indexes built or extracted

- **Productivity** index (total pub / months of publishing); control for age
- **Internationalization** index (extracted **affiliation** and **country** names, then n.o. of non-Italian authors / n.o. of total authors of paper)
- **Mean coauthors** index (average coauthors for all publications)
- **Type of documents** produced by each scientist (article, review, book, chapter, ...)
- Publication **language**
- Publication **impact** index (number of citations per record for each scientist)
- **Six different sub-communities**, i.e., Sociology, Sociology of culture and communication, Economic sociology, Environmental sociology, Political sociology, and Sociology of law and social change

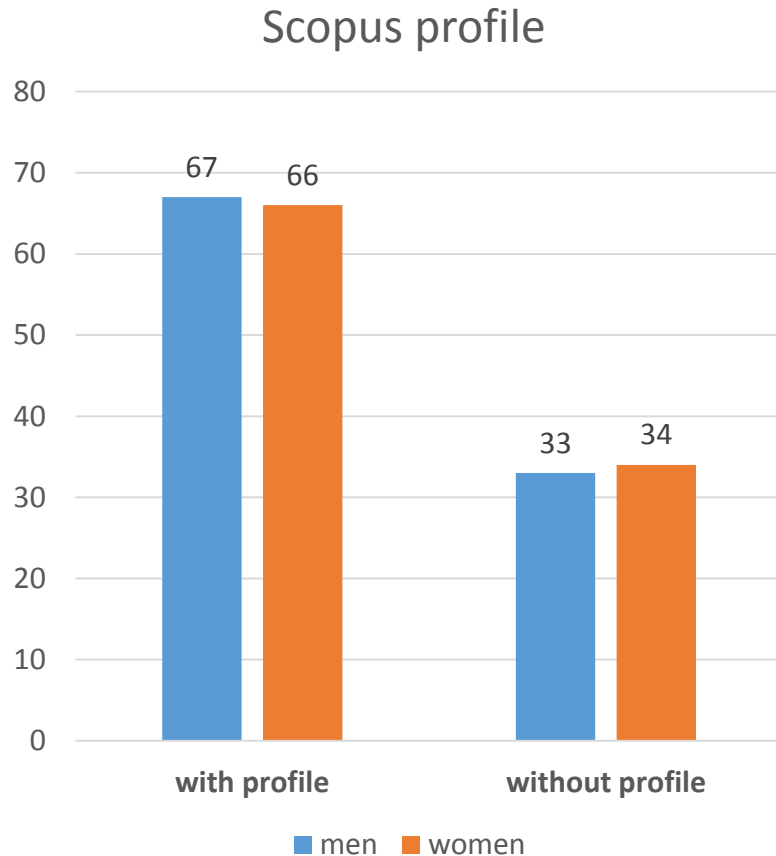

Coauthorship network indexes

- To examine how scientists managed coauthorship strategies **throughout their scientific career**
- **Multiple ties** for repeated coauthorship
- **Loop** for solo written papers
- Network analysis indexes
 - Structural holes and clustering coefficient (e.g. transitivity)
 - Density of graph
 - number of triangles
 - Degree and betweenness centralization
 - Kcore

Results

Faculty members

- Only **67 %** have Scopus profile (at least one publication in indexed journals, book or book chapter, conference proceeding, etc.) **33 %** no profile
- Scopus profile coverage of male and female sociologists are close (67% & 66%)

Academic levels coverage in Scopus data

Conclusions

Conclusions

- Somehow similar coverage of Scopus data between men and women
- Highest coverage of Scopus on full professors
- Highest coverage of Scopus on Economic sociologists
- Differences in internationalization trends and not purely average increase as expected (based on literature)
- Differences in number of coauthors trends and not purely average increase as expected (based on literature)
- Differences in increase in English publications
- Huge differences in Italian publications trends

Conclusions

- General **increase** of **article** production although with some differences across communities
- Preference for **books** is different across communities (higher in political and economic and general rather than others)
- **Density** generally decreases (4 exceptions); This would indicate that sociologists developed less cohesion and cohesive subgroups
- **Clustering coefficient** generally decreased (confirming above) with exception of 5 groups; it shows sociologists in our sample, generally, are increasingly bridging between people who don't know or work with each other
- Differences in scientists **individual strategies** to manage their coauthorship networks that needs further investigation
- Macro view on community (graph of all Italian sociologists, in case there is time)

Timetable of research and other paper ideas

- **1st paper**
 - Evaluating how Italian sociologists reacted to ANVUR initiative
 - Literature review Data gathering (late July 2016-October 2016); Finalize report and submit (November 2016)
- **2nd paper**
 - Evolution of Italian sociologists community from beginning so far
 - January – March 2017
- **3rd paper**
 - Explanative view toward coauthorship networks, and answering why questions for observed trends (ERGM with contextual factors)
 - Simulation (ABM) with aim of projecting observed evolution of community to near future
 - April 2017 onwards
- Finalizing thesis report (putting pieces together; monograph / collection of papers)
 - 2018

Many thanks for your attention

Auto-Response - 19/09/2016 10.37 AM

Dear customer, Thank you for contacting Scopus Author Feedback. This is an automated acknowledgement to confirm that we have successfully received your request for an amendment to the specified author profile. For all future correspondence regarding this request, please quote your unique reference number provided in the subject header of this email. Please be advised that it may take up to seven days before your requested changes appear online. We appreciate your patience in this matter. If we require further information about your inquiry, we will contact you at the email address provided within two working days. If the information you have provided is sufficient and allows us to process your request, we will only contact you upon completion. To learn more about the Scopus author profiles, citation counting and our content policy, please visit our help files at <http://help.elsevier.com/app/answers/list/p/8150/> (<http://help.elsevier.com/app/answers/list/p/8150/>) Kind regards, The Scopus Feedback Team

Thank you for contacting Scopus.

I have reviewed your author profile request and not able to process the changes.

Upon investigation I noticed that different author IDs belonging to different authors are selected to merge.

For this reason it has failed the validation and the request is cancelled.

Could you please recheck the corrections and submit a valid request.

Please let me know if you have any questions, I will be happy to assist to you further.

Kind regards,

Nikitha DEv

The Scopus Feedback Team

Dear

thank you so much for your reply, but I still do not know how to solve the situation.
It is quite clear that many publications of mine have been assigned to another , the fact is
that I don't know how to isolate them, since it seems that I do not have a scopus ID (despite I have many
publications and citations on scopus indexed journal)...

To sum up, I am:

Scopus
EXPORT DATE:22 Sep 2016

Thank you for your feedback.

Please note, I have processed the correction to remove your article from the author profile Id "22333280600".
Once the article is removed a new author profile ID will be created for your article.

I kindly request to wait for seven days for the correction to appear online in Scopus database. I appreciate
your patience in this matter.

Should you have further requests, please do not hesitate to contact us via the customer forms at
http://elsevier6.custhelp.com/app/ask_scopus/p/8150 (http://elsevier6.custhelp.com/app/ask_scopus/p/8150)

Kind regards,

Nikitha DEv

The Scopus Feedback Team

2 points of view to co-authorships

- Choosing **some journals** and following all papers published in them to see co-authorships (can be called sociocentric and complete network view)
- Choosing **some scholars**, and following all their papers and publications in different journals to see co-authorships (can be called ego-centric view)
 - Consider scholar like “**network manager**” type in **Burt’s** terms, someone who decides and manages his scientific collaborations through time (**like a stochastic actor oriented model assumption**)
- How you define your nodes and ties, changes the way you are capturing the network and model the social phenomenon under study ...
 - Revisiting the Foundations of Network Analysis, Carter T. Butts, Science 325 , 414 (2009)

Summary, Empirical and policy implications (1/2)

- I hope to understand the individual strategies in scientific collaborations; **efficient strategies to suggest to others**
- I hope to find ways to **decrease the expenses in economy of science** like university and research expenses through suggesting more fruitful strategies of collaboration
- tracing the **strategic use of social capital by scholars for career** in a competitive manner
- Better understanding of the interplay of **collaboration and competitive pressures in the scientific community** and their evolution

Summary, Empirical and policy implications (2/2)

- An **economic sociology** approach to **science** that looks at strategic, economic motivations and social norms and consider context-specific factors (e.g., disciplinary fields)
- How **institutes can improve research initiatives** and motivate scholars
- **Where to publish**, to get more noticed and build better collaborations in future
- **Students**, where to apply, where to affiliate, who to work with (personality and strategies); (**online laboratory, give your past, know your future**)
- Is it the university and department that matters, or individual initiative ...
- Maybe better **evaluation indexes for universities, departments, fields ...**
